#360 NON-FIBERED EMULSION

TROPICAL ROOFING PRODUCTS’ #360 NON-FIBERED EMULSION is a versatile water based roof and waterproof coating. #360 is a solvent free, all purpose, non fibered coating ideal for use as a surface coating to protect built-up roofing, metal, and masonry surfaces, and for pipes and tanks above or below ground level. #360 is cold-applied, corrosion-resistant, and waterproof when dry. #360 will not run, sag, crack, or “alligator” under most weather conditions. Meets and exceeds all the requirements of ASTM D 1227, Type III, Class I. UL Classified.

PREPARATION: All surfaces must be clean, have proper drainage, and be free from rust, dirt, and all other foreign matter. Clean all cracks, holes, and damaged areas, repairing when necessary and allow repairs to thoroughly cure.

APPLICATION: Apply #360 by roofing brush, roller, or spray, evenly covering the surface. Two coats are recommended. Allow to dry completely between coats. Dry time is usually 6-24 hours in dry or hot weather conditions. In cool or damp weather drying will be slower, 2–7 days.

COVERAGE: Apply at the rate of approximately 3-4 gallons per 100 square feet per coat as a topical protective coating and 6-8 gallons total for restoration systems.

PRECAUTIONS: DO NOT ALLOW TO FREEZE. DO NOT THIN. DO NOT HEAT CONTAINER or store at temperatures greater than 120°F. Do not apply when ambient temperature is below 55°F, or if there is a threat of rain, heavy dew, or temperatures below 40°F within 48 hours. Application over hot applied asphalt may not prevent alligatoring. This coating is not recommended over rubber, PVC sheet roofing or old roofs that are too dry and brittle. When transporting this product, be sure the pail is secured and the lid is tight. Do not allow pail to tumble as this may loosen the lid and allow leakage to occur.

CAUTION: DO NOT TAKE INTERNALLY! KEEP OUT OF REACH OF CHILDREN.

VAPOR DENSITY — HEAVIER THAN AIR

DO NOT USE IF RAIN IS IMMINENT - COATING MUST BE DRY BEFORE EXPOSURE TO WATER
